This dog is a CARRIER of progressive retinal atrophy (rcd4).

*Authentication code:* AC6643135

---

*Explanation of terms:*

CARRIER: these dogs have one copy of the mutation and one normal copy of DNA. These dogs will not develop PRA themselves as a result of the rcd4 mutation but they will pass the mutation on to approximately 50% of their offspring. We cannot exclude the possibility that carriers might develop PRA due to other mutations they might carry that are not detected by this test.
